

Emergency Lowering Instructions

Genie Diesel Scissor Lift

Machine Range: GS2668 RT

If there is a machine breakdown or if the operator becomes incapacitated it may be necessary to perform an emergency rescue from the ground. Emergency rescues must be rehearsed routinely.

Warning

While every effort is made to ensure that the information provided is accurate and up to date, we are not able to guarantee the completeness and accuracy of these instructions and you should therefore not rely on them. Nationwide Platforms Ltd accepts no liability for reliance on the contents of this information sheet which has been produced as additional GUIDANCE ONLY and is not intended to replace the manufacturer's manual. You should refer to the manufacturer's manual.

You should not operate this Mobile Elevating Work Platform (MEWP) unless you are suitably trained and fully familiarised with its operation and the emergency procedures set out in the manufacturer's manual. Operating plant necessarily involves risk of injury to the person.

Before starting work consider the following:

- Will there be a second person in the vicinity of the machine to undertake a rescue if required?
- Have both the operator and rescuer been familiarised with the ground controls?
- Can the rescuer gain access to the ground controls? i.e. Ensure that the machine is not parked with the ground controls facing a wall or similar obstruction.
- Is the key in the ground control to allow the rescuer to switch power from basket to ground controls?

Before attempting to lower platform:

- It is imperative that an inspection be carried out to ensure the lowering of the platform is not hindered by obstructions such as steel work, pipes, cables, etc. It may be necessary to retract the extension deck prior to lowering.
- If the operator has been incapacitated ensure they will not be put in additional danger by lowering of the platform. Remember that completing a rescue in 4-6 minutes may be critical.
- If unsure seek help (it may be necessary to carry out a mid air rescue).
- Carefully plan each action before starting to lower the platform.

If there are no obstructions and the power is functional:

In order of preference, always attempt C before attempting D

- 1 Check for any obstructions.
- 2 Press and hold the centre pad switch then hold down the yellow arrow.
- 3 The machine will start to lower.
- 4 Turn key switch to ground position.

Key switch

(Panels may vary slightly in appearance depending on year and model but all have the same functions)

If the engine fails to start:

In the case of a mechanical breakdown it may be necessary to lower the scissor using the auxiliary lowering system.

- 1 Press and hold the auxiliary lowering button.
- 2 Press and hold the yellow arrow. The machine will start to lower.
