

# Lithium-ion Technology

## The versatility of battery with the performance of diesel

Lithium-ion battery powered tracked booms provide quiet and emission free operation, without the need for combustion engine or electric cables.

Fully charged in four hours and 80% charged in just two hours, the Lithium-ion technology provides a full day's use from a single charge whilst achieving the same speeds and performance as its diesel counterpart.

Maintenance-free batteries also eliminate the need of 'topping up' with acid, thus reducing the risks of potential harm to personnel and the environment.

### Benefits include:

- Perfect for indoor and outdoor use
- Quiet and emission free operation - ideal for indoors or residential areas
- Zero maintenance
- Quick charge - 80% charge in 2 hours
- Full days use from single charge
- No trailing electric cables
- Comparable operational performance to diesel equivalent
- Energy efficient - power only used when the machine is in use
- Zero impact on performance when working in +/- temperatures
- Eco-friendly / CO2-free
