

# Emergency Lowering Instructions

## JLG Electric Scissor Lifts

Machine Range: 1930ES, 2030ES, 2630ES, 3246ES, 1932, 2032, 2033, 2646 and 3246

If there is a machine breakdown or if the operator becomes incapacitated it may be necessary to perform an emergency rescue from the ground. Emergency rescues must be rehearsed routinely.

### Warning

While every effort is made to ensure that the information provided is accurate and up to date, we are not able to guarantee the completeness and accuracy of these instructions and you should therefore not rely on them. Nationwide Platforms Ltd accepts no liability for reliance on the contents of this information sheet which has been produced as additional GUIDANCE ONLY and is not intended to replace the manufacturer's manual. You should refer to the manufacturer's manual.

You should not operate this Mobile Elevating Work Platform (MEWP) unless you are suitably trained and fully familiarised with its operation and the emergency procedures set out in the manufacturer's manual. Operating plant necessarily involves risk of injury to the person.

### Before starting work consider the following:

- Will there be a second person in the vicinity of the machine to undertake a rescue if required?
- Have both the operator and rescuer been familiarised with the ground controls?
- Can the rescuer gain access to the ground controls? i.e. Ensure that the machine is not parked with the ground controls facing a wall or similar obstruction.
- Is the key in the ground control to allow the rescuer to switch power from basket to ground controls?

### Before attempting to lower platform:

- It is imperative that an inspection be carried out to ensure the lowering of the platform is not hindered by obstructions such as steel work, pipes, cables, etc. It may be necessary to retract the extension deck prior to lowering. It may be necessary to retract the extension deck prior to lowering.
- Carefully plan each action before starting to lower the platform.
- If the operator has been incapacitated ensure they will not be put in additional danger by lowering of the platform. Remember that completing a rescue in 4-6 minutes may be critical.
- If unsure seek help (it may be necessary to carry out a mid air rescue).

# C

## Lowering the platform using base controls:

In order of preference, always attempt C before attempting D

**Warning: do not hold onto or place any part of the body through the scissor arms due to crushing risk.**

- 1 Check for any obstructions.
- 2 Turn Key Switch fully clockwise to "base" position.
- 3 Pull out or twist Emergency Stop.
- 4 Operate and hold Function Switch in downwards position.
- 5 The platform should lower until it is 7 ft (2.1m) from the ground and then stop.
- 6 Release Function Switch and check for obstructions in scissor pack and that no one is standing under the extension deck if extended.
- 7 Operate and hold Function Switch in downwards position until platform fully lowered.

Lower Controls for ES Series

Lower Controls for E3 Series

# D

## Lowering the platform using emergency lowering handle:

**Warning: do not hold onto or place any part of the body through the scissor arms due to crushing risk.**

- 1 Check for any obstructions.
- 2 Pull and hold the Emergency Lowering Handle located at the rear of the machine base to lower the platform until it is approximately 7 ft (2.1m) from the ground and then stop (the descent alarm will not sound but you will hear a hissing sound as the oil flows back through the system).
- 3 Release the Emergency Lowering Handle and check for obstructions in scissor pack and that no one is standing under the extension deck if extended.
- 4 Pull and hold the Emergency Lowering Handle until the platform is fully lowered (the descent alarm will not sound but you will hear a hissing sound as the oil flows back through the system).
